

## **Letter to investors and partners of DécouvAIRte-Éole.**

Dear,

I would like to request your attention in order to submit to you a differentiated vision allowing the production of completely carbon-free energies: electricity and hydrogen.

I programmed the technical progression of this project in two stages:

The first that I am financing will be devoted to the manufacture of a demonstrator with a 2.20 m diameter turbine.

The second, for the manufacture of a 1/2 scale prototype measuring 4.50 m in diameter.

For its creation, I am looking for partners to ensure the technology transfer of this machine. There are many potential customers.

Self-consumption of energy is growing almost everywhere. Small communities, hamlets, towns, localities, isolated dwellings are looking for autonomous energy production systems: In France, as in all countries in the world and more specifically (in the countries of the global south)

Xavier COULON

President of DécouvAIRte-Éole
